Corning® SMF-28e+™ Optical Fiber with NexCor® Technology
Product Information

**Trusted Performance Today and in the Future**

Corning Optical Fiber continues to push single-mode fiber to new levels and evolve its standard single-mode optical fiber offering by adding the performance advantage of NexCor® technology to the trusted SMF-28e® optical fiber. The result is Corning® SMF-28e+™ optical fiber, a full spectrum single-mode fiber that is fully backward compatible with legacy single-mode fibers and is the latest in a long line of fiber optic innovations from Corning.

Corning® SMF-28e+™ optical fiber, an ITU-T G.652.D-compliant optical fiber, is expanding the capability and performance of the world’s metropolitan and access networks that support all broadband applications, including CATV and fiber to the home (FTTH). Significant performance advantages compared to the industry’s legacy single-mode fibers include:

- **NexCor’s MaxPower™ technology’s 3 dB Stimulated Brillouin Scattering threshold improvement**, enabling twice the optical launch power for better system reach and coverage
- **Improved macrobend specifications**, from 0.05 dB to 0.03 dB, for improved handling and ease of installation, critical considerations in today’s access network designs
- **Tighter zero dispersion wavelength (λ₀) specification**, specifically the λ₀ tolerance has been improved from a range of ± 10 nm to ± 7 nm, to enable lower cost transmitters and simplified network planning.

As with all Corning fiber products, SMF-28e+ fiber complies with the industry’s most stringent requirements, including:

- ITU-T Recommendation G.652 (Tables A, B, C and D)
- IEC Specifications 60793-2-50 Type B1.3
- TIA/EIA 492-CAAB
- Telcordia Generic Requirements GR-20-CORE
- ISO 11801 OS2
